DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 28 and 30 are rejected under 35 U.S.C. 102(b) as being anticipated by Andrews et al. (US 2002/0003436).

In claim 30, Andrews teaches all claimed features in Figs. 6A and 7A, a method for communicating data between chips (900 and 950) comprising: generating a first signal (output from 910) in a first chip in response to a change in first data (OUT_P) at positive edges of a clock signal (positive edge of clock to 910, as seen in Fig. 6A); generating a second signal (output from 914) in the first chip in response to a change in second data (OUT_N) at negative edges of the clock signal (negative edge of clock to 914, as seen in Fig. 6A); passing the first signal and the second signal from the first chip (via 912) to a second chip (950 in Fig. 7A); toggling (clocking) a first bit (IN_P) in the second chip in response to the first signal (signal to 960); toggling (clocking) a second bit (IN_N) in the second chip in response to the second signal; and setting the first bit and the second bit to initial values (inherent).

Claim 28 corresponds to detailed circuitry already discussed similarly with regard to claim 30.

Art Unit: 2819

3. Claims 1-13, 15-18, 20-22, 25-27 and 31 appear to comprise allowable subject matter.

Response to Arguments

4. Applicant's arguments with respect to claims 28 and 30 have been considered but are moot in view of the new ground(s) of rejection.

The newly applied reference of Andrews et al. clearly anticipates all claimed recitations of claims 28 and 30, as set forth in detailed above.
